

## Installation instructions:

1. install anaconda
2. open anacondaprompt
3. create a virtual environment and activate it with the following commands:
  - i) `conda create -n <environment_name> python=3.6`
  - ii) `conda activate <environment_name>`
4. navigate to the directory where the project exists
5. run the command (verbatim):  
`FOR /F "delims=~" %f in (requirements.txt) DO conda install --yes "%f" || pip install "%f"`

## Running the program:

1. navigate to the project directory
2. run the following command:  
`python main.py`
3. from a browser, navigate to `http://localhost:5000/`
